Gemeten met een automatische regenmeter. Deze meet vaak kleinere hoeveelheden dan een handregenmeter. Oudere gegevens zijn hiervoor gecorrigeerd.

Neerslaghoeveelheid per maand (mm) Achtergrondkleur: neerslagoverschot / -tekort	-100 -50 0 50 100 150 extreem droog heel droog vrij droog vrij nat nat heel nat extreem nat	Droogte Top 3 (rangorde per dag) 1e ■ 2e ■ 3e ■
--	---	--

Op basis van neerslag- en verdampingsgegevens van het KNMI. Verdampingsgegevens volgens Makkink. Berekening neerslagoverschot wijkt af van het KNMI. Berekening: Neerslagoverschot = neerslagoverschot van de dag + neerslagoverschot voorgaande dagen x 0.980 LogboekWeer.nl
